

**You demand the best...
And we deliver!**

We go to exceptional lengths to give you the most complete, potent and affordable products on the market.

Competition and racing demand the best.

The secret to success is hard work, determination and a little GLC5500.

**performance
is everything**

Spiers Peace winning the Tedworth Gold Cup 2006 ridden by Ryan Bliss owned by Mr & Mrs P Aurdry, trained by John Dufosse

performance is everything...

**but don't take
our word for it**

"All of our horses are fed GLC5500 daily. It is an important part of keeping horses sound. We have found that it is low cost, safe and effective."

Michael Dickinson, legendary racehorse trainer who prepared 1996 Breeders Cup Mile Winner, Da Hoss, to repeat his win in 1998 after a two-year lay off.

Dickinson also consistently achieves an annual win rate of over 25% including 8 Group 1 winners.

"I have tried many joint supplements for my Hackney horses over the years. I have fed GLC5500 since September 2002 and I am confident that it is the best available. I feed it to all my horses including Harness Horse of the Year Winner Tenderfield Black Shadow. These horses are performing to their maximum ability and by feeding GLC5500 we ensure that their flexibility and overall joint performance is as good as it can be. "

Roger Bass, producer of champion Hackney horses, Essex, UK.

Competition and racing demands only the best.

performance is everything

world class riders agree...

"GLC5500 has significantly improved my horse's performance. As both a veterinarian and an eventer, I highly recommend GLC 5500 for any horses in competition"

Penny Rowland DVM and Canadian 2002 WEG eventing team

"I have seen a definite improvement in my horse's performance"

"GLC has helped my horse to regain elasticity and ease of movement so important in the sport of dressage"

George Meichowski, President of the Canadian International Dressage Riders Association and World Cup finalist.

I am extremely pleased with the effects of GLC5500 on Smoke, evident by his improved performance and attitude to work. He has eleven years of training and competition, thousands of miles conditioning, 21 one hundred mile endurance races, 3500 competition miles, is still finishing in the top ten and winning the prestigious 'best condition awards,' thanks to GLC 5500!

Connie Walker and DML Smoke Silver: Pan American Gold Medallist, US World Endurance Team member.

"My horses picked up a virus [in the autumn] and it went round the whole yard. The blood pictures showed viral signs and we could not get the bloods right. By February the event season was looming and the blood pictures for the competition horses were still bad. A friend recommended Actimmune and so I tried it and noticed an improvement within 10 days. Their bloods are all now good and the horses look and feel a million dollars. I will definitely keep all the competition horses on Actimmune during the season"

Georgia Bale, Event rider and Breeder.

Actimune... works!

"I feed Actimune to thoroughbred foals and yearlings under my care as well as my own competition horses. In all cases I have seen how Actimune, by maximizing the effectiveness of the immune system, enables horses to resist infection. Actimune also has some important side benefits, including maintaining appetite under high stress conditions. I would recommend Actimune to anyone wanting to maximize a horse's ability to keep itself healthy without resorting to the use of prescription drugs".

Dr Jean Lamb, veterinary surgeon,
Kentucky.

"We started all the horses on Actimune 5 weeks before the start of the season, to get it into their systems. We have fed it the way the Americans do, and every time anything gets a bit of a snuffle I just up the feeding rate for a couple of days and it seems to disappear! Actimune definitely seems to work and we have stayed bug free all season".

Wessex area Point to Point trainer,
John Dufosse, is having one of his best seasons (2005/2006) ever with over 20 wins so far. From his yard of 22 horses, he has had 105 runners and over 50% have won or been placed. John is pleased with the way Actimune has helped his horses stay fit and well.

"Fast work, travel, and a change of environment weakened my lovely event horse's immunity to viruses. Actimune helped bring him back to fitness and competition and he is now better than ever before. I feed Actimune to all my event horses to support their immune systems, giving them maximum protection".

Liz Romyn, Event Horse Owner.

"We have fed Actimune to a selected number of our foals and yearlings over the past 12 months and early indications are that Actimune does support their immune system, giving these individuals a noticeably better defense against virus attack"

The Chevoloy Park Stud, Newmarket.

Actimune is made in USA

What is it?

Horses are pretty good at looking after themselves in their natural environment. However, in their domesticated state we tend to ask a lot of their vital systems by the way they are housed, fed, trained, travelled and competed with. When their immune systems are compromised, horses become susceptible to illness and infection.

Actimune addresses this problem by providing a unique formulation of natural ingredients to help horses fight infection. Formulated by equine nutritionists and veterinarians, Actimune is an apple flavoured supplement that is given in small quantities with the daily feed.

What does it do?

Actimune helps maximise the healthy function of three key systems within the horse:

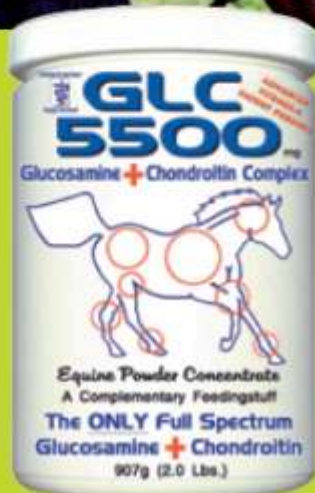

- Provides nutritional support to help maintain a healthy immune system, which in turn helps horses to fight infection.
- Assists in maintaining the natural efficiency of the digestive system, thus allowing the horse to make the best use of feed and to maximise his performance potential
- Helps stimulates the horse's own production of red blood cells to maintain the healthy oxygen-carrying capacity of the blood.

ACTIMUNE GEL has been specially developed to provide added protection to foals from birth, by supplying nutrients to help stimulate the immune function at this vulnerable stage in the foal's life. Each easy to administer oral syringe contains 60cc of gel, which should be given at 15cc per day over 4 days. Once the foal is eating hard food it can be given Actimune powdered feed supplement. Actimune Gel can be used for adult horses if required.

"I have found GLC5500 to be the best oral joint supplement on the market. I recommend GLC with the utmost confidence for all my clients. The results are undeniable".
John Piehowicz, DVM, Leading track veterinarian and specialist in ambulatory medicine.

Performance and results are all about healthy horses – so why compromise?

GLC5500 is the only specific joint supplement to contain a full spectrum of glucosamine and chondroitin compounds to support healthy articular cartilage and hyaluronic acid production. This unique, all natural formulation contains a high concentration of ingredients to replenish the joints with nutrients that may be lost through age or injury.

The GLC formula brings together all of today's existing medical evidence in oral chondroprotective research. GLC's full spectrum profile provides glucosamine in all four glucoprotein formulations and bioavailable anion forms. When combined with low molecular weight, purified chondroitin sulphate and the crucial biocatalysts, ascorbate and manganese, GLC's inclusive composition constitutes the most rational approach to oral joint supplementation.

GLC is scientifically engineered to work with the body's natural repair mechanisms. Only GLC addresses utilization through essential synergistic bonds between vital metabolic precursors; glucosamine, chondroitin ascorbate and manganese.

"GLC's comprehensive formula takes a logical approach to oral joint supplementation. The higher concentrations found in GLC5500 provide the proper ratios to benefit developing and mature cartilage".

Martha Rodgers, DVM,
lameness specialist,
Lexington, Kentucky.

Actimune and GLC5500 do not contain in manufacture, any prohibited substances under UK Jockey Club or FEI rules.

MADE IN USA

Actimune provides the support you need to help horses fight infection and stay on track.

Actimune is an apple-flavoured supplement.

Feeding rate

28g (1oz) per day maintenance, increased to 56g (2oz) per day at times of increased risk of exposure to infection.
